

A blurred, grayscale image of a crowd of people, likely at a public event or conference, serves as the background for the left side of the slide. A solid teal diagonal line separates this background from the dark blue background on the right.

CSWIM

COVID-19

Compliance, risk and infection
management

COVID-19 is rewriting the rulebook for health and safety in the workplace.

It's not as simple as enforcing an arbitrary 2m distance.

New risk control measures include limiting the number of people in an area at one time, reducing unnecessary movement, reconfiguring entrances and routes, assigning workers to isolated teams, targeted cleaning and contact tracing.

Most workplaces are not set up to monitor and manage movement.

Ensuring compliance and managing risk means managing behaviour.

Workplace risk management has never before required such extensive monitoring of movement and behaviour.

Track everywhere the employee goes, and everyone they interact with, throughout the workplace.

Tracking technologies can sense the movement of every employee and visitor across the entire workplace, making monitoring compliance and managing risk possible.

crowd**connected**

Time. Budget. Complexity.

Solutions need to be deliverable quickly, and at a time when budgets and resources are under pressure.

You need solutions that are effective and economical, don't require additional resource or training, and can be deployed very quickly.

Any additional overlay is going to be too costly and too slow to deploy for the rapid return to work.

Use the hardware already in place. WiFi networks and smartphones.

CSWIM takes advantage of the WiFi network already installed, and the mobile phones that almost every employee brings to the workplace.

crowd**connected**

A self-managing system that requires no calibration or testing.

Movement and contact tracking systems won't work if they need time-consuming calibration, testing or monitoring. Or require lengthy training and setup.

CSWIM takes 5 minutes to connect to your WiFi network. Access points are assigned to places in the web UI. And the only other setup required is to upload a list of employees and their network usernames.

Aruba Central Streaming API Integration

To connect to the Aruba Central Streaming API please provide your key and endpoint below and click connect.

Built-in features to ensure adoption across the entire workforce

CSWIM continually monitors which employees are generating data, and whether the data looks normal.

This allows you to target nudges and communication to continually ensure very high participation rates.

Without taking up valuable time and resources.

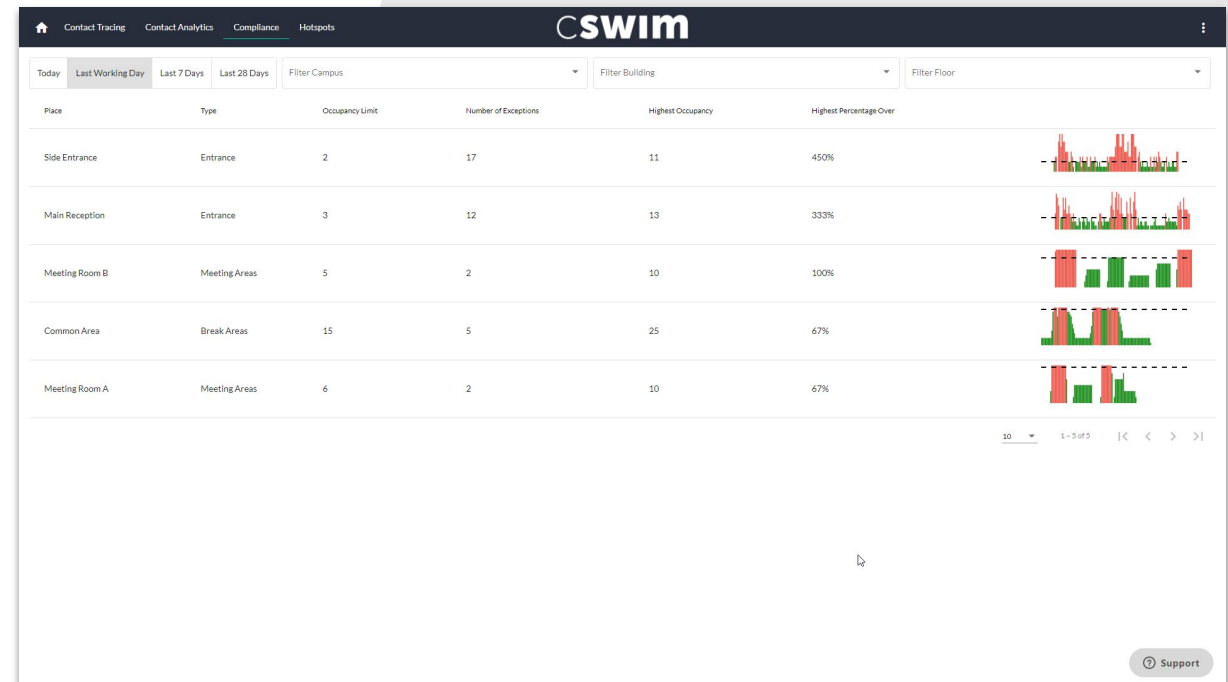

The screenshot displays the CSWIM 'People' interface. At the top, there is a navigation bar with links for 'Contact Tracing', 'Contact Analytics', 'Compliance', and 'Hotspots'. The main header area includes the CSWIM logo and a 'People' title. Below this, there is a 'Filter' section with a search bar and a link to 'Import data from CSV'. The main content area is a table with columns for 'Status', 'Identifier', 'Employee Group', and 'Network Username'. Each row represents an employee, with a red dot icon in the 'Status' column. The table lists 10 employees: Abby N, Rosie M, Bob V, Jake N, Jake A, Charlie D, Gabby X, Elliot Test 2, Maisie Y, and Tom C. The bottom of the interface shows a pagination bar indicating '10' items per page, '1 - 10 of 12' total items, and navigation arrows. A 'Support' button is located in the bottom right corner.

Status	Identifier	Employee Group	Network Username
	Enter Identifier	Enter Employee Group	Enter Network Username
	Abby N	Accounts	Abby.N
	Rosie M	Accounts	Rosie.M
	Bob V	PR	Bob.V
	Jake N	PR	Jake.N
	Jake A	Accounts	Jake.A
	Charlie D	Accounts	Charlie.D
	Gabby X	Developer Group B	Gabby.X
	Elliot Test 2	Developer Group B	elliott.test
	Maisie Y	HR	Maisie.Y
	Tom C	Developer Group A	Tom.C

A set of new purpose-built tools to assess and control transmission risk.

One system provides all the tools needed to manage exposure risk:

- Risk Assessment
- Occupancy limits
- Group isolation (bubbles)
- Contact tracing
- Targeting of regular cleaning and deep cleaning

Nudge behaviour rather than rely on enforcement.

Managing compliance is an ongoing process. Compare this week's compliance to last week, or this month to last month. Identify where and when there are compliance issues.

Then generate lists of emails for the employees involved, and communicate in the right way to continually improve compliance.

Help people comply

Giving people as much information as possible will help them comply with new rules, and remain productive.

CSWIM provides an embeddable Live Occupancy Trends widget that can be used for digital signage, websites or mobile apps.

Reliable and robust, proven across hundreds of deployments each year.

CSWIM is a brand new product for companies facing a new problem.

But the underlying location tracking and analytics platform has been proven across the world in some highly challenging environments.
