C**SWIM**

SOLUTION OVERVIEW

CSWIM is a simple platform from Crowd Connected to track, analyse and trace movement and interaction, helping create a safe environment for the return to work or study.

The solution integrates with Aruba's Central Streaming API to track all logged in network users. (ALE integration is also possible.)

CSWIM is not an analytics tookit you need to learn. It's a tightly focused product to help with the key requirements of getting safely back to work or study.

Customers can be fully up and running with CSWIM in a few days. There is no hardware installation required. And no floorplans or visualRF setup.

1 Contact sales@crowdconnected.com to confirm your subscription and receive your CSWIM login.

2 Enable streaming APIs on your Central account and enter the endpoint and key into CSWIM.

3 Setup places and people: Import access point MACs and employee network logins.

PRICING

Pricing is based on the number of access points managed on Central. Subscription is billed monthly, with no mimum contract term. USD, GBP and EUR billing.
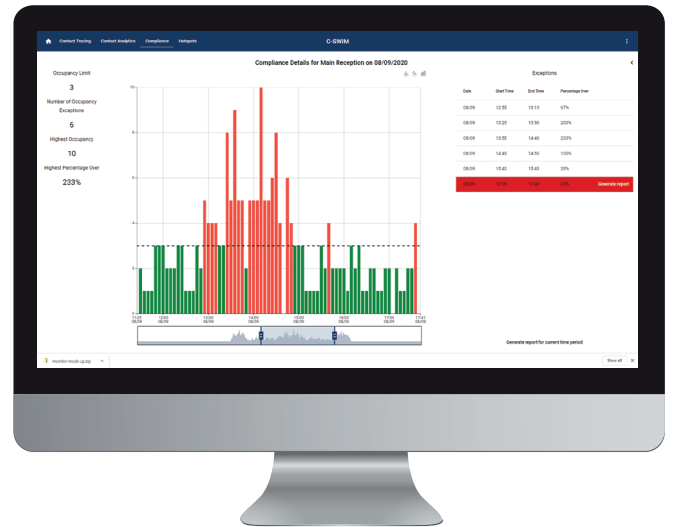

STANDARD	**ENTERPRISE**
£/€ 150 pcm	**£/€ 1000 pcm**
Includes 30 APs	Includes 200 APs
£/€ 5 pcm per additional AP	**£/€ 3 pcm per additional AP**

FEATURES

Contact Analytics
To plan control measures, and to understand their effectiveness, you need to be able to measure transmission risk. CSWIM measures the amount of contact taking place between people, and analyses where, when and with whom it's happening.

Compliance
Social distancing brings new procedures and rules such as maximum occupancies, and designated routes and bubbles. CSWIM helps you monitor compliance and identify individuals and groups who may need reminding.

Hotspots
Regular cleaning can help prevent surface transmission. CSWIM identifies high-traffic areas that should be targeted.

Contact Tracing
Isolating contacts of known cases is vital to limiting transmission. CSWIM provides a simple and secure contact tracing feature to help manage this.

Live Occupancy Trends
Embeddable widget for digital signage, websites or mobile apps providing weekly and daily occupancy trends combined with live occupancy levels.
